

Advanced Features Module Feature Listing

The features listed below are not included in the base configuration of the EG3000L, and are only available by purchasing the Advanced Features Module.

- **Group Bandwidth Policy** – This allows groups of devices to be assigned a single shared Bandwidth Cap (requires RADIUS)
- **Class-Based Queueing** – Allows the prioritization of Bandwidth Groups and an ability to provide minimum bandwidth assignments to those groups
- **Zone Migration** – Allows venues to be divided into VLAN Zones and to force re-login of devices between specified Zones
- **Destination HTTP Redirection** – Can be used to help guests upgrade their bandwidth plan during their authenticated time
- **ICC (Internet Control Console)** – Pop-up window that can be utilized to allow users to view and change their current billing and bandwidth options
- **QoS Support** – Allows the network administrator to add or change the 802.1p or DSCP tags on traffic flowing through the Nomadix Gateway
